## **Sarnafil and Midland Engineering** Proven Performance

Sarnafil Inc. and Midland Engineering have worked together since 1988, building a strong relationship based on a mutual desire to provide roofing specifiers and building owners with the best performing roofing solutions on the market today.

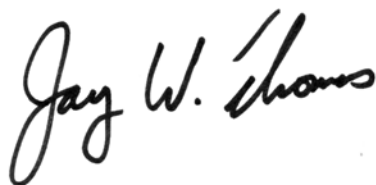

From the initial design stage of a roofing project through to final inspection and warranty issuance, Sarnafil and Midland Engineering offer their customers the peace of mind that comes with knowing they've selected the right roofing solution – and that it's installed properly.

### **Sarnafil's Elite Partner Program**

Only experienced Sarnafil applicators are invited to participate in Sarnafil's Partner's Club program. Each applicator is reviewed for technical competency, experience, financial stability and commitment to the roofing industry. Each approved applicator is thoroughly trained in the proper use and application of Sarnafil roofing systems.

As an "Elite" level member, Midland Engineering is one of a small group of Sarnafil approved applicators that has proven itself through consistent, quality applications of Sarnafil's roofing systems. Elite level applicators must meet rigorous criteria to become recognized as the best applicators in the industry.

Together, Sarnafil and Midland Engineering offer you a successful roofing installation that will stand the test of time. For over 40 years, Sarnafil's energy efficient single ply roofing systems have proven themselves on rooftops around the world, under all weather conditions. Selecting a team with experience and commitment to quality is the key to both a successful roofing installation and long-term performance.
